Priority roads during extreme weather events

1. Overview

In 2014, the Department for Transport (DfT) undertook a review of the how well the UK transport network copes in extreme weather events (the 'resilience'). This followed a period of extreme weather in 2013/14, which saw high winds and heavy rainfall. A number of recommendations were made as a result, including that local highway authorities "identify a 'resilient network' to which they will give priority" when extreme weather events occur.

As the highway authority, this council is responsible for the construction and maintenance of non-trunk roads, cycle ways, street lighting, bridges and structures and other highway assets. We want those to cope with any extreme weather and climate change.

A 'Resilient Highways Network' identifies the particular roads that would be given priority during adverse events, such as extreme weather. When extreme weather occurs (floods, storms, ice, snow etc), the main concern for the council will be to keep these roads open in order to maintain economic activity to town centres, industrial estates and business parks, and access to key services such as schools, railway stations, key food shops, petrol stations, hospitals, police, fire services etc.

This network would in the main be those roads that receive salting between October and April. These routes are chosen as they have the highest volumes of traffic and the greatest risk of accidents occurring. The roads within that network would be reviewed after an emergency event, or every two years if no events occur.

2. Why have a resilient highways network

The effects of climate change mean that extreme weather events are expected to become more frequent. Our climate in the UK is projected to change, bringing increasingly extreme weather, including heavier rain, more flooding and heat waves. Whatever we do now to reduce emissions of greenhouse gases, some of these future changes to our weather will be unavoidable due to our earlier emissions. We need to prepare for this increased level of extreme weather events.

Local authorities can have an important role in helping communities prepare for climate change. Many road improvements require long-term planning, making it even more important for local authorities to start planning now for future climate change. There is government funding that we can access to help make these preparations.

In order to maintain funding from the government's Department for Transport 'Incentive Fund', local highway authorities need to complete an annual self-assessment questionnaire, including 'Resilience'. In order to be considered a top-level highway authority and retain our government funding, Central Bedfordshire must show that we have a 'Resilient Highways Network' in place which is reviewed at least every two years.

Funding for the council would allow us to help minimise the affect of adverse events by prioritising faster repairs after an incident and also ongoing road maintenance. This would reduce the impact of any bad weather, and allow residents, businesses and emergency services to get back to normal as quick as possible.

Central Bedfordshire Council has developed a project plan so that its funding bid for 2018/19 (to be submitted in February 2018) will indicate that Central Bedfordshire Council is classed as a top-level highway authority.

3. What we are consulting on

A 'Resilient Network' of prioritised roads has been developed with input from the Emergency Planning Team and stakeholders from the Bedfordshire Local Resilience Forum, which includes the local emergency services, local authorities, the NHS, the Environment Agency and others who are all required to respond to any major emergency in Central Bedfordshire.

The council is seeking the public's views on the planned routes that the council (and its emergency services partners) have identified as a priority in the event of extreme weather. We also welcome the views of local town and parish councils; the local business community; and statutory consultees to this consultation.

After feedback via the consultation, the proposed 'Resilient Highways Network' of prioritised roads will then be taken to the Eastern Highways Alliance Benchmarking Group for a peer review by adjacent highway authorities.

Please see Appendix A and our map for further details on our proposed priority roads.

4. How to have your say

The consultation is open from 7 August 2017 until 30 October 2017.

You can have your say by answering a questionnaire on our website at www.centralbedfordshire.gov.uk/consultations or you can pick up a paper copy from your local library

The results of the consultation will be reported back to the Bedfordshire Local Resilient Forum. A final version of the resilient highways network will be presented to the Council's Executive Committee in December for adoption.
